Electromagnetic Radiation Safety

Scientific and policy developments regarding the health effects of electromagnetic radiation exposure from cell phones, cell towers, Wi-Fi, Smart Meters, and other wireless technology including 5G, the fifth generation of cellular technology. This website has had more than three million page views. @berkeleyprc

Thursday, July 7, 2022

Wireless Radiation TV News

**Which wireless radiation risks
are covered most by TV news in the USA?**

Since June, 2014, television stations in the U.S have aired **more than 300 news stories** about health risks from wireless radiation exposure. Almost half of the stories focus on radiation risks from use of a cell phone, including risks to children. About a third of the stories discussed cell tower radiation risks. More than a dozen stories focus on cell towers or Wi-Fi in schools. Other technologies of concern include wireless smart meters and Wi-Fi-emitting devices.

Since January 2018, more than 90 news stories have reported on health concerns about the **rollout of 5G,** the fifth generation of cellular technology. Public concern about this issue has been covered by national network news and by local TV stations in more than 20 states and the District of Columbia.

CBS and its affiliates have provided the most news coverage about wireless radiation and health. Besides CBS national news coverage, almost all major CBS stations have run stories including stations in Atlanta, Baltimore, Boston, Charleston, Chicago, Cincinnati, Dallas, Denver, Des Moines, Eugene, Houston, Los Angeles, Las Vegas, Miami, Minneapolis, New York, Oklahoma City, Philadelphia, Phoenix, Pittsburgh, Portland (OR), Raleigh, Sacramento, Salt Lake City, San Antonio, San Diego, San Francisco, Spartanburg (NC), Spokane, and Washington, DC.

CBS was the only television network to cover the two major wireless policy developments in 2015 (the **International EMF Scientist Appeal** and the **Berkeley cell phone "Right to Know" ordinance**), and the only network to cover the release of the California Department of Public Health's **cell phone safety guidance** in 2017.

CBS's ***60 Minutes*** has won every broadcast journalism award. In June, 2017, the show aired a story on smartphone addiction,**"Hooked on Your Phone?"**, and in December, 2018, a story on the adverse effects of digital device use on children, **"Phones, Tablets, and their Impact on Kids' Brains."** However, ***60 Minutes*** has yet to examine the health risks from the wireless radiation produced by these devices. With the publication of Norm Alster's book,"***Captured agency: How the Federal Communications Commission is dominated by the industries it presumably regulates***," it is time for *60 Minutes* to do an investigative story about why our **government has not updated the obsolete wireless regulations** that the FCC originally adopted in 1996 and reaffirmed in 2019 which fail to protect us from harmful levels of wireless radiation.

The above statistics are based upon Google searches for TV news stories about wireless radiation health risks where the video was posted online; thus, the overall amount of TV news coverage is under-estimated for this time period.

Links to TV new stories with online videos appear below.
